

# Focus on the First 5 Years: 10 Things Every Child Needs

Strong, Prepared And Ready for Kindergarten

An Education Initiative of  
Fox Valley United Way

# 10 Things Every Child Needs

At birth, an infant's brain is only 25 percent the size of an average adult's brain. Incredibly, by age 3, a child's brain has grown to 90 percent of an adult's brain. During infancy and early childhood, children are flooded with new experiences that impact their brain development. The first 5 years of a child's life offer parents an amazing opportunity to shape their child's growth and also form healthy habits that will last a lifetime.

It is important for parents to start as soon as possible to build the foundation that will help their children reach their full potential. The good news is that what every child needs; every parent can give. If we care for our children and give them what they need early in life, their future will be full of possibilities.

**SPARK Early Childhood Collaboration** promotes the following tips for the healthy development of all children prenatal through age 5.

*Information taken from 10 Things Every Child Needs DVD,  
produced by Robert R. McCormick Tribune Foundation*

# 1. Encourage Interaction

A child's brain develops based on early experiences at home. The more interaction a child has, the healthier his/her development will be.

## **What can parents do?**

Respond quickly to your child's needs.

Speak in a soft, slow voice.

Get down to your child's level; involve yourself in your child's play.

Engage your child in conversation.

Be present in your child's life.

## 2. Offer Physical Affection

Physical affection communicates love to young children, which in turn fosters positive emotional growth.

### **What can parents do?**

Be gentle and responsive to your baby's cues.

Massage your infant.

Hold your child when feeding him/her.

Rock your baby and look into his/her eyes.

Hold your child on your lap when playing or reading.

Hug your child often.

# 3. Provide a Stable Relationship

Children who have a stable relationship with at least one caregiver learn at a faster pace, feel better about themselves, and make friends more easily.

## **What can parents do?**

Hold your child on your lap during stressful situations, such as a doctor's visit.

Be a loving, consistent presence for your child.

Create an environment that allows your child to explore, but set limits to show both guidance and care.

Be nurturing and calm when interacting with your child.

# 4. Maintain a Safe, Healthy Home

Creating a safe and healthy home environment allows you to maximize your child's growth with minimal risk.

## **What can parents do?**

Child-proof your home.

Use age-appropriate car seats.

Be aware of the dangers of lead poisoning found in old paint chips and paint dust.

Feed your child a healthy, nutritious diet and avoid high-fat foods.

Ask your child's physician about developmental screening.

Visit your child's physician and dentist regularly.

Ensure your child is up-to-date on immunizations.

Encourage outdoor play and exercise.

# 5. Develop Strong Self-Esteem

A strong sense of self is the foundation for healthy development in young children.

## **What can parents do?**

Recognize and celebrate that every child is unique from birth.

Discover who your child is and value his/her identity.

Encourage your child to express himself/herself.

Praise your child with concrete positive feedback.

Respect your child and teach him/her to respect himself/herself and others.

# 6. Engage in Conversation

Communicating with your child not only shows love, but also encourages the development of his/her speech patterns.

## **What can parents do?**

Talk to your baby, early and often.

Sing to and with your child.

Use a broad vocabulary to expose your child to many different words.

Engage your child in conversation.

Read aloud to your child and ask questions of him/her.

# 7. Make Music

Music offers children an outlet for expression and stimulates brain development in language and reasoning.

## **What can parents do?**

Involve your child in music.

Sing, clap, dance and tap your feet together with your child.

Encourage your child to make his/her own music using household items.

Play music in your home and encourage your child to sing and dance.

# 8. Make Reading a Priority

Reading with children demonstrates a love for books and learning, and is a wonderful way for parents and children to spend quality time together.

## **What can parents do?**

Read to your child everyday.

When you read to your child, hold him/her on your lap.

Point to pictures and ask questions.

Re-read the same book to help your child make the connection between the written page and the spoken word.

Write down a story your child tells you - show them their words in writing.

# 9. Promote Play

Playing provides children with an outlet for imagination and creativity and fosters healthy brain development.

## **What can parents do?**

Be your child's playmate, engage in their play.

Encourage play by using everyday household items in creative ways.

Get to know your child through play.

# 10. Choose Quality Child Care

Since childcare settings can be a primary learning environment for children, the quality of the childcare setting is very important.

## **What can parents do?**

Take an active role in selecting the best childcare for your child.

Visit the childcare center with your child to determine your child's comfort level.

Ask yourself these questions when selecting childcare:

- Is it a safe, supportive environment?
- Do they serve nutritious food?

# 10. Choose Quality Child Care (continued)

For more information about childcare visit  
ExceleRate Illinois at [www.excelebrateillinois.com](http://www.excelebrateillinois.com)

- Do the childcare providers appear to enjoy interacting with the children?
- What are the ratios of caregivers to children?
- Look for the following ratios: 1 caregiver: 3-4 children (ages 0-3); 1 caregiver: 6-9 children (ages 4-5).
- Do the adults speak respectfully to the children and encourage them to express their thoughts and feelings?
- Are the adults down on the floor playing with the children?
- Does the center welcome parental involvement?
- If your child has special needs, do they have experience that will support children with special needs?

# Learn What Your Child Can Do!

## Developmental Screenings

- A developmental screening is a short, easy-to-complete formal assessment of young children's developmental skills, such as motor, cognitive, language, and social-emotional skills.
- Doctors, nurses, and other early childhood professionals use developmental screening to tell if children are on track with developing basic skills, or if they might have delays.
- A developmental screening tool, such as the Ages & Stages Developmental Screening, is a research-based instrument that asks questions about a child's development and gathers information.
- Developmental screenings can assist your child to be ready for school.
- Developmental screenings provide information to support your child's development.

**SPARK offers free developmental screenings! Call us for an appointment or attend a Play.Learn.Connect event. Information can be found on our website.**

# Gateway to Early Childhood Programs

SPARK's Gateway to Early Childhood Programs helps families and their children gain access to early learning and development programs, services and resources.

There are many resources available that you may be able to utilize and we want to share them with you!

## **Contact us today for the following:**

Family Gateway Interview: a single entry point for families looking to learn more about early childhood programs and service opportunities.

Learn what your child can do: early childhood developmental screenings.

Attend a **Play.Learn.Connect.** event: which unites local agencies and school districts in collaborative outreach to identify and enroll at-risk children.
